

This program calculates the area of a 2D convex hull given a matrix of points (order is not important).

Example:

Calculate the area of convex hull of these points:

(3,2) ; (0,0) ; (1,-1) ; (2,1) ; (3,0) ; (2,1)

Just enter `cnvhull(matrix of the points)`

Try to draw the points and to verify the solution.

This program has been already used many times without problems. If you find any bug first assure you to have selected the English language in the Mode and not to have translated the code with any program. If the problem persists, please, let me know.

For a better and faster answer, please, enclose some screenshot of the bug: entered inputs, expected outputs, error messages, erroneous code line, Mode setting... it will help me very much!
